- 50. (Canceled).
- 51. (Canceled).
- 52. (Canceled).
- 53. (Original) A language input user interface comprising:
 a line-based entry area;
 an input text displayed within the line-based entry area; and
 an output text, converted from the input text, displayed together with
 onverted input text within the line-based entry area.
- 54. (Original) A language input user interface as recited in claim 53, wherein the input text comprises a phonetic text and the output text comprises a character-based language text.
- 55. (Original) A language input user interface as recited in claim 53, wherein the input text comprises Chinese Pinyin and the output text comprises Chinese Hanzi.

- 56. (Original) A language input user interface as recited in claim 53, wherein the line-based entry area is oriented horizontally.
- 57. (Original) A language input user interface as recited in claim 53, wherein the output text replaces the input text from which the output text was converted.
- 58. (Original) A language input user interface as recited in claim 53, wherein the output text is further modified as additional input text is entered.
- 59. (Original) A language input user interface as recited in claim 53, wherein the output text is rendered fixed in response to user entry of punctuation.
- 60. (Original) A language input user interface as recited in claim 53, wherein the output text is rendered fixed in response to user confirmation of the output text.
- 61. (Original) A language input user interface as recited in claim 53, further comprising editing means for editing the output text within the line-based entry area without switching from an entry mode to an edit mode.
- 62. (Original) A language input user interface as recited in claim 53, further comprising an edit window, invokable by a user, positioned adjacent to particular output text to be edited.

(Original) A language input user interface as recited in claim 53, 63. wherein the line-based entry area is oriented in a first direction and further comprising an edit window positioned adjacent to the line-based entry area and oriented in a second direction orthogonal to the first direction.

64. (Original) A language input user interface as recited in claim 53, further comprising an input text hint, invokable by a user, positioned adjacent to line-based entry area near selected output text to be edited, the input text hint window containing the input text from which the selected output text was converted.

65. (Original) A language input user interface as recited in claim 53, further comprising a candidate list, invokable by a user, positioned adjacent to line-based entry area near selected output text to be edited, the candidate list containing one or more alternate output text candidates that may be substituted for the selected output text.

- 66. (Original) A language input user interface as recited in claim 65, wherein the output text candidates are ordered within the candidate list according to a ranking.
- 67. (Original) A language input user interface as recited in claim 65, wherein the candidate list is scrollable and the output candidates are animated during scrolling.

68. (Original) A language input user interface as recited in claim 53, further comprising:

first and second candidate lists invokable by a user;

the first candidate list containing one or more alternate output text candidates that may be substituted for the selected output text; and

the second candidate list containing a complete set of output text candidates than the first candidate list.

- 69. (Original) A language input user interface as recited in claim 68, wherein the output text candidates in the second candidate list are arranged according to complexity of character construction.
- 70. (Original) A language input user interface as recited in claim 68, wherein the output text candidates are ordered within the first candidate list according to a first metric and the output text candidates are arranged in the second candidate list according to a second metric different than the first metric.
- 71. (Original) A language input user interface as recited in claim 53, wherein the line-based entry area is oriented in a first direction, and further comprising:

an input text hint positioned above the line-based entry area near selected output text to be edited and oriented in a second direction orthogonal to the first direction, the input text hint containing the input text from which the selected output text was converted; and

a candidate list positioned below the line-based entry area near the selected output text to be edited, the candidate list containing one or more alternate output text candidates that may be substituted for the selected output text.

- 72. (Original) A language input user interface as recited in claim 53, wherein the input text contains phonetic and non-phonetic text and the output text, phonetic input text and non-phonetic input text are displayed together within the line-based entry area.
- 73. (Original) A word processor comprising the language input user interface as recited in claim 53.
- 74. (Original) A language input architecture comprising:

 a user interface to enable a user to enter an input text;

 a language conversion unit to convert the input text to an output text; and
 the user interface being configured to display the converted output text inline with unconverted input text.
- 75. (Original) A language input architecture as recited in claim 74, wherein the input text comprises a phonetic text and the output text comprises a character-based language text.
- 76. (Original) A language input architecture as recited in claim 74, wherein the input text comprises Chinese Pinyin and the output text comprises Chinese Hanzi.
